

## Functional Safety services (ISO 26262)

Applus IDIADA has broad experience providing support in the application of Functional Safety processes in accordance with ISO 26262 Functional Safety – Road Vehicles. Our team of systems/safety engineers has over 20 years' experience working hand-in-hand with automotive OEMs and industry suppliers.

With experience throughout the V-cycle, we offer solutions for all phases of the development lifecycle, including the management, design, implementation, verification and validation of automotive Electric and Electronic (EE) systems according to the ISO 26262 Functional Safety standard.

### FUNCTIONAL SAFETY SUPPORT THROUGHOUT THE DEVELOPMENT CYCLE

- IDIADA's Functional Safety services cover all applicable vehicle types, including cars, buses, trucks and motorcycles.
- Our Functional Safety experts work closely with your team to ensure efficient and effective application of the ISO standard. This will usually be a blend of remote and onsite working.

- Services include:
  - Gap analysis of your systems and work products against the requirements of ISO 26262
  - Development and delivery of functional safety work products
  - Review and update of your safety management procedures
  - Performing audits and independent reviews
  - Training

### SAFETY MANAGEMENT

IDIADA works with clients in a Functional Safety Manager role to help them move towards ISO 26262 compliance at both project and organisational level. IDIADA can work with clients to create and/or update procedures, processes and guidelines to align them with ISO 26262. Our specialists can conduct a gap analysis and recommend next steps towards compliance. IDIADA can also act as an independent reviewer, auditor or assessor.

## CONCEPT PHASE

IDIADA has extensive experience at the concept level, delivering work products at each stage of the process.

## DEVELOPMENT AT SYSTEM LEVEL

The IDIADA team has been delivering automotive solutions at system level for over 20 years. Our experts can work with your team to undertake the safety analysis and deliver a technical safety concept with technical safety requirements to match your system.

## DEVELOPMENT AT HARDWARE LEVEL

Our specialists provide support for hardware design ensuring safety mechanisms and hardware reliability metrics are met.

## DEVELOPMENT AT SOFTWARE LEVEL

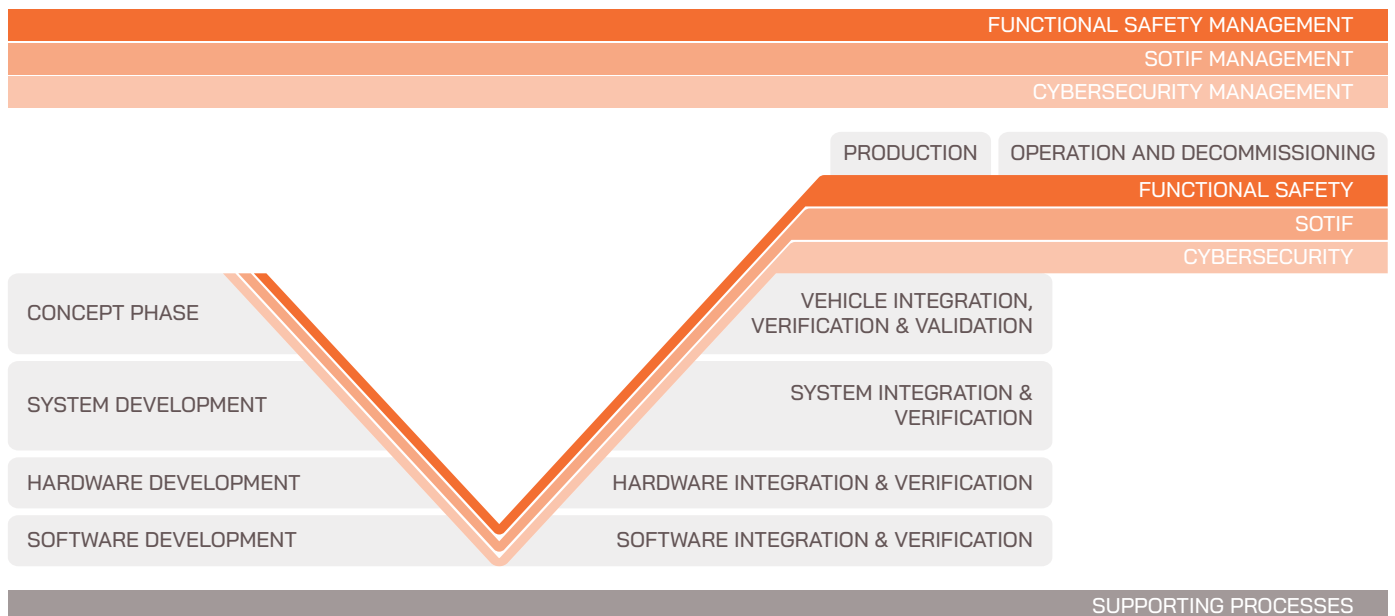

Software development support services include the definition of the software safety requirements, software design, unit testing and integration with other software units, as well as reviewing existing software specifications and design.

## ITEM INTEGRATION AND TESTING

Our item integration and testing services cover the integration and verification at hardware/software, system and vehicle level, together with calibration and optimization.

## DELIVERING FUNCTIONAL SAFETY, SOTIF AND CYBERSECURITY AS AN INTEGRATED SERVICE

In addition to Functional Safety, the IDIADA team can deliver both Cybersecurity and SOTIF (Safety Of The Intended Functionality) services. This joined-up service is aimed at reducing the effort required to ensure the systems covered are both safe and secure.
